PROFILE

Full-stack engineer with 4+ years of experience building scalable, production-ready web applications. Recently earned a Software Engineering degree, combining strong academic foundations with hands-on industry experience. Skilled in designing and developing reliable backend systems, implementing secure payment integrations, and delivering end-to-end solutions from concept to deployment. Experienced collaborating in cross-functional Agile teams to ship high-quality software that drives real business impact.

EDUCATION

Bachelor in Software Engineering JUN 2021 - JUL 2025

Adama Science and Technology University

GPA: 3.23/4.0

Final Year Project: Served as Project Manager and Full-Stack Developer for a platform aimed at streamlining Ethiopia's public transport system

- Built backend using Express.js and developed three frontend applications: a Flutter mobile app for commuters, plus two web dashboards for service providers and transport authorities
- Project received A+ grade and was highly praised by examiners for its real-world impact and technical execution

WORK EXPERIENCE

FREELANCE JAN 2022 - PRESENT

Full-Stack Developer

- Developed 10+ web solutions for local businesses including churches, furniture stores, and photography studios, ranging from simple landing pages to complex management systems
- Built full-featured order management systems with secure admin portals including order tracking, staff management, financial tracking, transaction processing, analytics, and custom reporting
- Created a custom photo delivery system for photography studios that eliminated third-party file-sharing services; studios can now upload and share client photos directly via the website, significantly improving customer satisfaction based on direct client feedback
- Automated manual order management processes for furniture stores and studios, enabling remote business monitoring and reducing customer order processing time
- Developed solutions using MERN stack (MongoDB, Express, React, Node.js) and PHP/MySQL based on specific client requirements

EVERLINK DIGITAL TECHNOLOGIES

JUN 2023 - SEP 2024

Full-Stack Developer

Hello Balemuya Platform (Workforce-Employer Connection)

- Joined a struggling project and debugged/resolved all existing backend issues, stabilizing the platform for further development
- Built core features including workforce-employer matching algorithm, location sharing, and mapping integration
- Developed a comprehensive call center support system including ticket creation from complaints, support team assignment workflows, staff management, and platform-wide analytics reporting

Furniture Raffle Platform

- Sole backend developer for a complete raffle management system, working alongside a frontend team
- Implemented core functionality including raffle algorithms, ticket purchasing/management, and user management
- Integrated SantimPay payment gateway for local bank payments.
- Built a full-featured admin portal for comprehensive platform and raffle management
- Collaborated across frontend and mobile teams during integration, ensuring consistent backend performance across web and mobile clients

OTECH ENGINEERING

JUL 2025 - SEP 2025

Full-Stack Developer

- Updated company website using Django templates, HTML/CSS, and Bootstrap, improving both visual design and page load speed by 60% without altering backend functionality
- Contributed to ERP system development working specifically on the procurement module using Python, Odoo framework, and PostgreSQL
- Successfully deployed the procurement module for production use, enabling streamlined purchasing workflows
- Collaborated with backend team in an Agile/Scrum environment, participating in sprint planning, daily standups, and code reviews

AdV3nture

DEC 2025 - PRESENT

Backend Developer

- Developed backend for an investor-startup connection platform using MERN stack with PostgreSQL database
- Built a Tinder-style swipe algorithm that enables investors and startups to express mutual interest and connect
- Integrated TalkJS for real-time messaging and chat functionality between connected parties
- Implemented KYC verification for platform users to ensure compliance and trust.
- Developed subscription tier system with feature restrictions based on user plans, and integrated Stripe payment processing for subscription management and payments
- Built user-facing data analytics to help investors and startups track engagement and platform activity
- Implemented comprehensive admin portal with sophisticated analytics dashboards for platform monitoring and oversight
- Platform successfully launched in February 2026 and is currently serving <100 users with zero critical issues post-launch
